From: http://stackoverflow.com/questions/32377291/insert-date-in-filename-while-knitting-document-using-rstudio-knit-butto

This code (see header above) will insert the current date in to the html output filename. Limited - only works with pdf & changes function of knit button!

Change the `.pdf` to `.html` if you knit to html.

Better to use:

```
rmarkdown::render("test.Rmd",output_file=paste0('test',Sys.Date(),'.html'))
```

(or similar) in the console...
